

FILTER BRITA PURITY C300 FINEST

The special filter suits only for the preparation of coffee (Vending Appliances and Espresso).

The Filter from the water removes water stone, chlorine, heavy metals and small particles and water.

At 10, KH filters 1800 lit.

Trusted BRITA Systematic Filter Technology softens water in four steps:

1 Pre-filtration

A pre-filter retains coarse particles.

2 Total hardness reduction

Filter medium reduces the total hardness of water and clearly reduces limescale and gypsum deposits.

3 Activated carbon filtration

All water runs through an activated carbon filter, reducing taste and aroma-impairing substances.

4 Fine filtration

Finally, a fleece retains any remaining fine particles.

IntelliBypass technology

Unique IntelliBypass technology allows for a constant by-pass water rate regardless of volumetric flow. For consistently high water quality, in particular with low water throughput rates.
