

FILTER BRITA PURITY C50 QUELL ST

Great for coffee and Espresso Vending machines, hot and cold drinks. The Filter from the water removes water stone, chlorine, heavy metals and small particles and water. Because of the unique By Pass Water allows you to prepare a constant

quality of drinking water, regardless of the region and its quality. At 10 KH and ByPass This 40%, it filters 960 L and is recommended

for very small consumers.

Trusted BRITA Systematic Filter Technology decarbonises water in four steps:

1 Pre-filtration

A pre-filter retains coarse particles.

2 Carbonate hardness reduction

Filter medium reduces carbonate hardness to reduce limescale formation.

3 Activated carbon filtration

All water – including bypass water – runs through an activated carbon filter to reduce taste and aroma impairing substances.

4 Fine filtration

Finally, a fleece retains remaining fine particles.

IntelliBypass technology

The unique IntelliBypass technology allows for a constant by-pass water rate irrespective of the volumetric flow. This ensures

consistently high water quality, particularly in case of low water throughput rates.
