

PURITY C500 FINEST

FILTRATION

Trusted BRITA Systematic Filter Technology softens water in four steps:

1 Pre-filtration

A pre-filter retains coarse particles.

2 Total hardness reduction

Filter medium reduces total hardness of water and clearly reduces limescale and gypsum deposits.

3 Activated carbon filtration

All water runs through an activated carbon filter, reducing taste and aroma-impairing substances.

4 Fine filtration

Finally, a fleece retains any remaining fine particles
