

FILTER BRITA PURITY C150 QUELL ST

Great for coffee and espresso vending machines, hot and cold drinks and very small convection ovens.

The filter removes scale, chlorine, heavy metals and small particles from the water.

Because of the unique by-pass of the water, it allows you to prepare a constant quality of drinking water, regardless of the region and its quality.

At 10 KH and by-pass of 40%, it filters 2408 L, therefore, it is recommended for small consumers (e.g. up to ½ kg of coffee consumption per day).
